

Unilabs

IHS

Independent Histopathology Services

The Cellular Pathology Laboratory providing a diagnostic service of the highest quality and value to the independent sector and NHS

Accredited Medical
Laboratory
Reference No. 2380

A total solution, delivering fast results, from the collection of your specimen to the delivery of your report

- Run by Doctors, for Doctors
- Sub-specialty Expertise: ENT, Max Fax, Gynaecology, Dermatology, Urology, GI, Breast, Cytopathology
- Rapid Turnaround Times

1. Collection of Specimens

Specimens can be collected from any location of your choice. Our transport experts, Medical Couriers, are leaders in their field and have ISO 9001 registration.

2. Delivery

Subject to a full audit trail, the specimens will be delivered to the IHS laboratory, which holds full accreditation from CPA.

3. Processing

Once registered at sample reception, the specimen is immediately cut up by a consultant pathologist or biomedical scientist. Specimens are then processed through to molten wax.

4. Embedding, Cutting and Staining

After processing, the specimens are embedded. The wax blocks are then cut using a microtome and sections are placed onto a glass slide. The slides are stained and cover-slipped, now ready for the pathologist to report.

5. The Pathologist's Report

Both the slide and request form are presented to the pathologist in the relevant sub-specialty for rapid diagnosis. Pathology images will be available upon request.

6. Results

Your results can be faxed, sent by hard copy to your chosen location, or electronically viewed via the secure IHS weblink.

7. Doctors For Doctors

Your IHS pathologist will be happy to discuss any aspect of the case.

Using IHS? It's about time.

IHS provides the total solution for cellular pathology support. Our Doctors For Doctors approach, which seeks to encourage close working relationships between our pathologists and consultant colleagues, is the cornerstone of our business.

- Full histopathology service
- Cervical screening using liquid-based cytology or conventional smears
- Primary, checking and consultant opinion
- Processing-only service if required
- High-risk HPV, chlamydia, gonorrhoea testing, and non-gynaecological cases

Using IHS? It's about time.
